PATENT  
P56829**IN THE SPECIFICATION**

Please amend, on pages 13 and 14, paragraph [0079] incorporated with amendments as filed on March 18, 2008, as follows:

[0079] The present invention can also be realized as computer-executable instructions in computer-readable media. The computer-readable media includes all possible kinds of media in which computer-readable data is stored or included or can include any type of data that can be read by a computer or a processing unit. The computer-readable media include for example and is not limited to, ~~storing storage media~~, such as magnetic ~~storing storage~~ media (e.g., ROMs, floppy disks, hard disk, and the like), optical reading media (e.g., CD-ROMs (compact disc-read-only memory), DVDs (digital versatile discs), re-writable versions of the optical discs, and the like), hybrid magnetic optical disks, organic disks, system memory (read-only memory, random access memory), non-volatile memory such as flash memory or any other volatile or non-volatile memory, and other semiconductor media, electronic media, electromagnetic media[[,]] and infrared media [[,]]. ~~and other~~ The data may be transmitted via a communication medium [[media]] such as carrier waves (e.g., transmission via the Internet or another computer). ~~Communication media~~ The transmission paths of a communication medium generally carry computer-readable instructions, data structures, program modules or other data in a modulated signal such as the carrier waves or other transportable mechanism including any information delivery media. Computer-readable media may also be transmitted via such as ~~communication media may include a~~ wireless media such as radio frequency, infrared microwaves, and wired media such as a wired network. Also, the computer-readable media

PATENT  
P56829

can store ~~and execute~~ computer-readable codes that are distributed in computers connected via a network. The computer readable medium also includes cooperating or interconnected computer readable media that are in the processing system or are distributed among multiple processing systems that may be local or remote to the processing system. The present invention can include the computer-readable medium having stored thereon a data structure including a plurality of fields containing data representing the techniques of the present invention.
